Indium phosphide (InP)/zinc sulfide (ZnS)-MPA-COOH quantum dots are a type of nanocrystal made of InP and ZnS semiconductors that are coated with MPA (3-mercaptopropionic acid) and functionalized with COOH (carboxylic acid) groups..

Quantum dots have unique optical and electronic properties and are used in a variety of applications, including biological imaging, sensing, and drug delivery. COOH functionalization allows for the attachment of biomolecules, such as antibodies or enzymes, to the surface of the quantum dots for targeted imaging and therapeutic applications.
