Nickel (II) Chloride Hexahydrate, also known as nickelous chloride hexahydrate, is a green crystalline compound with the chemical formula NiCl₂ · 6H₂O. Nickel (II) Chloride Hexahydrate is used in various industrial and research applications. It is commonly used as a catalyst in organic reactions, including hydrogenation, polymerization, and oxidation reactions. It is also used as a precursor in the production of other nickel compounds and as a source of nickel ions for electroplating.
