

# Alloy Nickel Chromium Alloy Powder

Composition Chart

## NiCr

Stock No:  
**NS6130-12-001089**

CAS : 11106-97-1  
Purity : 99.9%  
APS : 80-100nm  
Color : Gray  
Form : Powder

### Technical Specification

Molecular Formula : NiCr

An alloy is a mixture of chemical elements of which at least one is a metal. Unlike chemical compounds with metallic bases, an alloy will retain all the properties of a metal in the resulting material, such as electrical conductivity, ductility, opacity, and luster, but may have properties that differ from those of the pure metals, such as increased strength or hardness.

Nickel Chromium Alloy Powder is alloy of nickel and chromium metal. Nickel Chromium Alloy properties have high melting point, corrosion resistant. Nickel Chromium Alloy is widely used in electric heating elements in applications such as hair dryers, explosives and fireworks industry.
