

Microcrystalline **CELLULOSE**

NS6130-10-1231

Quick Facts

Product	:	Microcrystalline Cellulose
Stock No	:	NS6130-10-1231
CAS	:	9004-34-6
Purity	:	97.0 - 102%
Shape	:	Round

Technical Specification

Diameter	Thickness
150 mm \pm 1mm	500 μ m

Microcrystalline cellulose (MCC) is a naturally occurring, partially depolymerized cellulose that is widely used in the pharmaceutical, food, and cosmetic industries. It is commonly used as a diluent or filler in tablets and capsules, and can also be used as a binder, disintegrant, or emulsifier in various pharmaceutical formulations. MCC is used as a thickener and binder in various formulations, including lotions, creams, and shampoos. It can also be used as an abrasive in exfoliating products due to its gentle nature.
