

MONOLAYER GRAPHENE

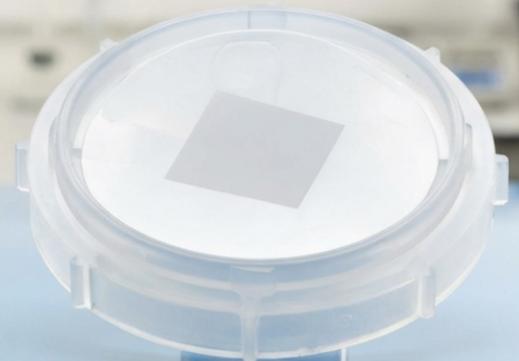

on Quartz

NS6130-10-1274

Quick Facts

Product	:	Monolayer Graphene on Quartz
Stock No	:	NS6130-10-1274
Purity	:	> 99.9%
Transparency	:	> 97%
Coverage	:	> 95%
Thickness	:	0.345 nm

Monolayer graphene on quartz refers to a thin layer of graphene that is deposited on a quartz substrate. Monolayer graphene on quartz is a promising material with unique properties and applications in a wide range of fields, including electronics, optics, thermal management, and biomedical engineering. Monolayer graphene on quartz has potential applications in biomedical research and development, such as drug delivery systems and biosensors. Monolayer graphene has unique optical properties such as transparency and high absorbance, which make it suitable for use in optical devices such as touch screens, solar cells, and optical sensors.
