Ultra-high-molecular-weight polyethylene, otherwise known as UHMWPE, has been relied upon due to its very high ultimate tensile strength, good biocompatibility, corrosion resistance, low water uptake, a low coefficient friction, and high abrasion resistance. UHMWPE is odorless, tasteless, and nontoxic. Such properties define UHMWPE's use in many development areas and in medicine and biology, including the manufacture of artificial joints and implants for surgery and orthopedics.
