

NS6130-12-001636

ALUMINIUM

Alloy Powder

Quick Facts

Product	:	Aluminium Alloy Powder
Stock No	:	NS6130-12-001636
Form	:	Powder
Color	:	Black
APS	:	5-59µm

Purity
>99%

Aluminium is a chemical element with the symbol Hf and atomic number 72. Aluminium metals are good conductors of heat and electricity. Due to its good nuclear performance, metal hafnium is widely used in the atomic energy industry. It has good welding performance, processing performance and performance of high temperature resistance and corrosion resistance. As a neutron absorber, it can capture a large area of thermal neutrons, and can be used to produce nuclear reaction control rods and protection devices. In addition, hafnium is prone to launching electrons. It can be used as the cathode in X-ray tube, and is common electronic material in photovoltaic manufacturing industry. Aluminium is a good alloy material, with a strong ductility, an antioxidant capacity and a high temperature resistance.
