

Aluminium-Silicon-Magnesium

Alloys Powder

Aluminium-silicon-magnesium alloys have occupied significant position in the field of automobile applications. They are mainly used in engine parts. One important feature of this alloy, which is very valuable in their use as electrical cables.

Stock No:
NS6130-12-001422

Formula
Al:Si:Mg

- Used in automotive industry
- Used in electronic equipment's
- Used in corrosion resistance of materials
- Used I aerospace and high performance applications

Purity
99%

Density : 1.8g/cm³

Melting Point : 570-590 °C

APS:
40-60µm
