

Copper Silver

Alloys Powder

Copper Silver Powder with the aim of developing antibacterial surfaces for the medical and health care sector. Copper Silver Powder in clinical settings can be an alternative or complementary antibacterial strategy to other existing technologies and disinfection interventions. Copper-silver alloy coating which has important applications in the field of catalysis, there have been few studies on electrodepositing Copper Silver Powder in ionic liquids. Copper Silver Powder is often used as a catalyst, which may limit the application of the alloy plating.

Stock No:

NS6130-12-001799

Formula

CuAg

Purity
99.9%

APS : 15µm

Form : Powder

APS:
15µm
