

NS6130-12-000045

CALCIUM POLYSTYRENE SULPHONATE NANOPARTICLES

Quick Facts

Product	:	Calcium Polystyrene Sulphonate Nanoparticles
Stock No	:	NS6130-12-000045
CAS	:	37286-92-8
Molecular Formula	:	C ₈ H ₇ CaO ₃ S ⁺
Form	:	Powder

Purity
>99.9%

Technical Specification

Molecular Weight	Density	Melting Point	APS
223.28 g/mol	1.33g/cm ³	760 °C	<150nm

Calcium Polystyrene Sulphonate is used in the treatment of increased potassium levels in blood. It is used in patients with kidney problems and on dialysis. Calcium Polystyrene Sulfonate is used for reducing blood levels of potassium. It is used for the treatment of hyperkalemia (high potassium levels) associated with kidney conditions such as anuria, severe oliguria, chronic kidney disease, etc. It is also used to reduce high potassium levels in patients who are undergoing regular dialysis.

C₈H₇CaO₃S⁺
APS <150nm
