Nano Chelated Phosphorus Fertilizer 17

Nano fertilizer, the most important field of agriculture has been to the attention of the soil scientists as well as the environmentalists due to its capability to increase yield, improve soil fertility, reduce pollution and make a favorable environment for microorganisms.

Nano fertilizers in boosting nutrients uptake and nutrients use efficiency, reducing losses through leaching and gaseous emissions along with reducing the risk of nutrient toxicity for ensuring food security achieved through higher productivity and economic turnouts by practicing the sustainable farming practices.

Analysis:

Phosphorus(P) : 17%

Characteristics:

Stock No. : NS6130-12-001941

Purity : 99.9%

Formula : P (Phosphorus)

Main Effects

- Boosting root production
- Improving fruit color, Accelerating fruit ripening
- Increasing leaf & bud number
- Increasing reproductive organs growth
- Quality improvement of crops
- Accelerated shoot growth & dark green color improvement in plants

Nanoparticles are also available in fertilizer/ pesticides ultra high purity. Nanoparticles used in research area of strong scientific interest due to the variety of application in agriculture widely used in research area due to their increased reactivity as compared with conventional nano/micron sized particles. We are offering them in different shape & sizes. The costumer value products for their performance by Nanoshel
