## Chelated Nano Fertilizers(Zn.B.N.K)

Nano fertilizer, the most important field of agriculture has been to the attention of the soil scientists as well as the environmentalists due to its capability to increase yield, improve soil fertility, reduce pollution and make a favorable environment for microorganisms.

Nano fertilizers in boosting nutrients uptake and nutrients use efficiency, reducing losses through leaching and gaseous emissions along with reducing the risk of nutrient toxicity for ensuring food security achieved through higher productivity and economic turnouts by practicing the sustainable farming practices.

### Analysis:

Zinc	:	6%
Boron	:	3%
Nitrogen	:	7%
Potassium	:	10%

### Characteristics:

Stock No.	:	NS6130-12-001952
Purity	:	99.9%
Solubility	:	Soluble in water

### Main Effects

- Yield increase
- Preventing flower drop
- Maximum transformation of flowers to fruit
- Improving flowering organs to increase pollination
- Increase in flower buds resistance to winter & spring cold

Nanoparticles are also available in fertilizer/ pesticides ultra high purity. Nanoparticles used in research area of strong scientific interest due to the variety of application in agriculture widely used in research area due to their increased reactivity as compared with conventional nano/micron sized particles. We are offering them in different shape & sizes. The costumer value products for their performance by Nanoshel
